

Top of the Rion Range of Sound Level Meters

NEW

Sound level meter
and 1/3 octave band real-time analyzer

NA-28

Easy to use compact design with comprehensive features

Rion's priorities for on-site measurements are speed, ease of use, quality and reliability.

The New NA-28 is the top of the Rion range of sound level meters and analyzers. It combines cutting edge technology with excellent quality and unrivalled ease of use.

Key Features Include:

- Ease of use - main functions on dedicated, backlit keys
- Superb high-contrast backlit TFT-LCD colour display
- Simultaneous measurement and display of 1/1 and 1/3 octaves
- One keystroke to switch between sound level meter and analyzer display
- Massive storage capacity using text files stored to CompactFlash memory cards (CF card)
- Flexible and simple PC connectivity (CF card and USB Virtual Disk)
- Exceptional battery life using standard alkaline batteries, approx. 16 hours

NA-28

System constitution

Key Capabilities

- Real Time Octaves (16 Hz to 16 kHz) or 1/3 octaves (12.5 Hz to 20 kHz)
- Real Time Simultaneous Octaves (16 Hz to 8 kHz) and 1/3 Octaves (12.5 Hz to 12.5 kHz)
- Data stored as text files direct to CF card
- Measures and logs L_{eq} , L_{max} , L_{min} and 5 percentile values (L_N) in octaves and/or 1/3 octaves
- Auto Stores 300 000 data sets or 1 000 hours of 1 second 1/3 octaves onto 1 GB CF card
- Auto Stores 1 000 data sets or 10 000 of 1 second 1/3 octaves to internal memory
- Manual Storage for 1 000 data sets internally or 100 000 data sets to 1 GB CF card
- Linearity 110 dB in Sound Level Meter Mode and 95 dB in Analyzer Mode
- 16 hours battery life with 4 Alkaline 'C' Cells
- Main and Sub-Channel for simultaneous selection of 2 time or frequency weightings
F (Fast), S (Slow), 10 ms Time Weightings plus Peak & Impulse on Sub-Channel
- Data transfer using CF card or USB (meter/CF card appearing as virtual disk)
- Measurement can be started by internal or external trigger
- Comparator output to trigger external devices
- AC and DC outputs of main and/or sub-channel
- Expandable functionality using programme cards

Key Options

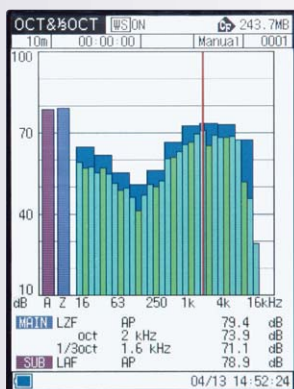

- Building Acoustics Programme Card
- Uncompressed WAV file recording Programme Card

Flexible user interface

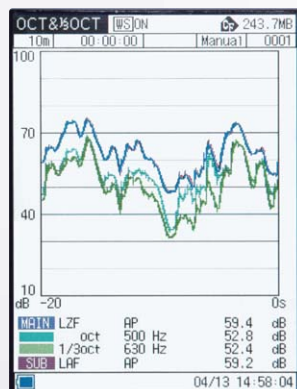

- 1 CF card slot
- 2 Infrared remote control sensor
- 3 AC adapter terminal
- 4 Two-way trigger input/comparator output terminal
- 5 AC output terminal
- 6 DC output terminal
- 7 USB terminal

Waveform Recording Card NX-28WR

NX-28WR is a program card that provides the NA-28 with recording functions. Using the NA-28 and NX-28WR in combination makes it possible to measure sound pressure levels together with sound pressure waveforms during frequency analyses. Since the data are recorded in uncompressed WAVE files, they can be handled with software*1 compatible with the WAVE and analyzed.

*1 Software may not be compatible depending on sampling frequencies. If the software is not compatible, use a sampling converter to change sampling frequencies.

Sampling Frequencies & CF Card Recording Time

	128 MB	256 MB	1 GB	2 GB
48 kHz	15 m	30 m	2 h 10 m	4 h 40 m
24 kHz	30 m	1 h	4 h 20 m	9 h 20 m
12 kHz	1 h	2 h 10 m	8 h 50 m	18 h 50 m
64 kHz	10 m	20 m	1 h 40 m	3 h 30 m
32 kHz	20 m	50 m	3 h 20 m	7 h
16 kHz	50 m	1 h 40 m	6 h 40 m	14 h 10 m

Recording time would be somewhat changed by the number of files including recording data.

Feature 1 Replay of recorded sound – It is possible to immediately identify unnecessary or unknown sounds by listening to the recorded data*2

*2 Using Windows Media Player

- I conducted sound analysis but there are irregularities in the analysis results and I don't know what causes them.
- I detected the sound of a police car siren during measurement of traffic noise and I would like to exclude it.
- I measured sound levels and would like to listen to specific events.

Feature 2 Reanalysis of recorded sound – It is possible to reanalyze data based on the recorded waveforms using waveform analysis software

- I conducted 1/1 octave band analysis but I need to be able to conduct 1/3 octave band analysis.
- I conducted 1/3 octave band analysis but I need to be able to conduct analyses in more detail by FFT.

Specifications

Sampling frequency	Octave, 1/3 octave simultaneous analysis	48 kHz, 24 kHz, 12 kHz
Sound meter, octave analysis, 1/3 octave analysis	64 kHz, 32 kHz, 16 kHz	
Quantization bit length	16 bit	
Data format	WAVE	
Frequency weighting	Z weighting (flat response) (fixed)	
Recording functions		
Event mode	Level recording, interval recording, manual recording	
Total mode	Total recording	
Simultaneous use with Building Acoustics Card NX-28BA		
During sound insulation and impact sound measurement	Total recording	
During reverberation time measurement	Total recording with pre-trigger (1 s)	

Replay and reanalysis cannot be made with the NA-28 unit.

Software Recorded data by NX-28WR can be displayed and analyzed using optional software.

Waveform processing software

DA-20PA1 Optional accessory

Octave band analysis screen

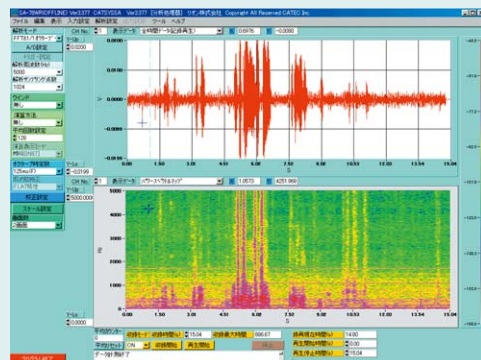

Operating environment requirements

CPU : Intel Pentium 4, 2 GHz or more
RAM : 512 MB or more
HDD : 10 GB (free space) or more
OS : Microsoft Windows 2000 / XP

Waveform	
Applicable	Wave format created by NX-28WR
Display	Scaled time axis, RMS, Percentile sound level (L_{nT}), Equivalent continuous sound level (L_{eq}) and Sound exposure level (L_{E})
Filter	High pass, Low pass and band pass, Reproduction of sound after filtering
File output	WAVE format and CSV format (Channel separation and interval designation are possible each format)
FFT analysis	
Frequency range	Decided by settings on Sound level meter NA-28
Sampling points	64 to 32 768 points
Averaging function	Linear average
Window function	Hanning, Rectangular, Flattop
Display	Power spectrum (Differential & integral calculus available for spectrum area)
Octave band analysis	
Applicable standard	IEC 61260 Class 1 JIS C 1514
Mode	1/1 octave band and 1/3 octave band
Frequency range	1/1 octave band : 0.5 Hz to 8 kHz (15 bands) 1/3 octave band : 0.4 Hz to 16 kHz (47 bands)
Time weighting	1 ms, 10 ms, 35 ms, 125 ms (Fast), 630 ms, 1 s (Slow), 10 s
Frequency weighting	FLAT, A, C, G and Lv

Waveform analysis software

CAT-78WR Optional accessory

Spectrum map screen

Operating environment requirements

CPU : Intel Pentium M, 1 GHz or more
RAM : 512 MB or more
HDD : 5 GB (free space) or more
OS : Microsoft Windows XP Professional

Waveform	
Applicable	Wave format created by NX-28WR
Display	Scaled time axis, Differential and integral calculus available
File output	WAVE format (Channel separation and interval designation are possible) CSV format (Interval designation is possible) and JPEG
FFT analysis	
Frequency range	Decided by settings on Sound level meter NA-28
Sampling points	64 to 32 768 points
Averaging function	Linear average, maximum hold
Window function	Hanning, Rectangular, Flattop, Exponential, Force
Display	Power spectrum, Cross spectrum, Transfer function, Coherence, Spectrum map, Differential and calculus for spectrum area
Octave band analysis	
Applicable standard	IEC 61260 Class 1 JIS C 1514
Mode	1/1 octave band and 1/3 octave band and 1/12 octave band
Frequency range	1/1 octave band: 0.5 Hz to 8 kHz (15 bands) 1/3 octave band: 0.4 Hz to 10 kHz (45 bands) 1/12 octave band: 0.36 Hz to 11 kHz (180 bands)
Time weighting	1 ms, 10 ms, 35 ms, 125 ms (Fast), 630 ms, 1 s (Slow), 10 s
Frequency weighting	FLAT, A, C

Building Acoustic Card NX-28BA

NX-28BA is a program card used in NA-28 for simple and easy measurement of airborne and floor impact sound insulation of buildings and the reverberation time. The measurements conforming to ISO and single-number quantities can also be calculated by the main body of NA-28. Data is stored as text files. Furthermore, when used in conjunction with the waveform recording card NX-28WR, sound waveforms during measurement can be recorded simultaneously.

Applicable specifications

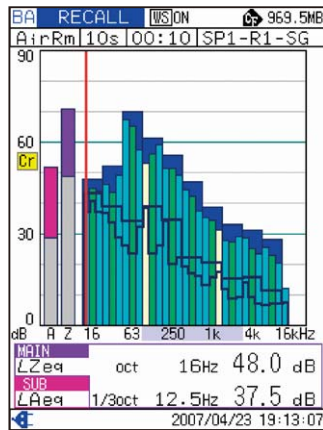

- ISO 140-4 Acoustics – Measurement of sound insulation in buildings and of building elements – Part 4: Field measurements of airborne sound insulation between rooms
- ISO 140-7 Acoustics – Measurement of sound insulation in buildings and of building elements – Part 7: Field measurements of impact sound insulation of floors
- ISO 717-1 Acoustics – Rating of sound insulation in buildings and of building elements – Part 1: Airborne sound insulation
- ISO 717-2 Acoustics – Rating of sound insulation in buildings and of building elements – Part 2: Impact sound insulation
- ISO 140-5* Acoustics – Measurement of sound insulation in buildings and of building elements – Part 5: Field measurements of airborne sound insulation of façade elements and façades
- ISO 16032* Acoustics – Measurement of sound pressure level from service equipment in buildings – Engineering method

*The main body performs measurement only.

Specifications

Analysis mode	Real-time octave band analysis, Real-time 1/3 octave band analysis Real-time octave, 1/3 octave band simultaneous analysis (Sound level meter mode is not available)
Measurement items (vary with measurement mode)	Instantaneous sound pressure level L_p Equivalent continuous sound pressure level L_{eq} Maximum instantaneous sound pressure level L_{max}
Measurement of airborne sound insulation between two rooms	
Settings	Measurement time 1 to 60 sec Number of setting sound sources 1 to 8 points Number of measurement points in sound source room 1 to 10 points Number of measurement points in sound receptor room 1 to 10 points Background noise measurement mode None (none)/Once (1 point)/Before/During
Calculations	Average measured value, single number quantity, insulation factor value (D-value)
Display	L_p/L_{eq} (Background noise sound level), $L_p/L_{eq}/L_{max}$ (Sound level in sound receiving room) Displays results overlaid with background noise (for measurement in sound receiving room) Displays alarm when the SPL difference with background noise is too small (for measurement in sound receiving room)
Measurement of floor impact sound insulation (for light impact source)	
Settings	Measurement time 1 to 60 sec Number of setting sound sources 1 to 8 points Number of measurement points in sound receiving room 1 to 10 points Background noise measurement mode None (none)/Once (1 point)/Before/During
Calculations	Average measured value, single number quantity, insulation factor value (LL-value)
Display	L_p/L_{eq} (Background noise sound level), $L_p/L_{eq}/L_{max}$ (Sound pressure level in sound receiving room) Displays results overlaid with rating curve Displays results overlaid with background noise Displays alarm when the SPL difference with background noise is too small
Measurement of floor impact sound insulation (for heavy impact source)	
Settings	Measurement time 1 to 60 sec Number of setting sound sources 1 to 8 points Number of measurement points in sound receiving room 1 to 10 points Number of measurements 1 to 5 times Background noise measurement mode None (none)/Once (1 point)/Before/During
Calculations	Insulation factor value (LH-value)
Display	L_p/L_{eq} (Background noise sound level), L_p/L_{max} (Sound pressure level in sound receiving room) Displays results overlaid with rating curve Displays results overlaid with background noise Displays alarm when the SPL difference with background noise is too small
Measurement of indoor noise rating	
Calculations	Indoor noise rating value (NC-value or N-value)
Display	Displays results overlaid with rating curve
Measurement of reverberation time	
Settings	Measurement time 2 to 60 sec (varies with sampling cycle) Repeat count 1 to 10 times
Calculations	T20, T30 (using the least squares method) Reverberation time calculated for random segments
Display	Averaged reverberation time, reverberation decay curve
Other measurements	Measurement of exterior wall sound insulation, Measurement of equipment noise
Other capabilities	Dedicated address display and Auto-increment, Alarm display, Settings change monitoring function, Waveform recording function (NX-28WR is separately needed)

Windscreen correction	Frequency response correction to ensure standard compliance with windscreen installed correction on/off setting via menu				
Diffuse sound field correction	Correction of frequency characteristics in order to comply with standards (ANSI S1.4) in diffuse sound fields Correction function on/off operation implemented on the menu screen				
Display	Color semi-transparent TFT-LCD display with backlight (240 x 320 dots)				
Refresh cycle	100 ms				
Trigger	Controls measurement and memory storage start.				
Level 1	Measurement starts with the trigger level (1 dB intervals) as threshold and stops when the set measurement times elapses. Slope +/- is set.				
Level 2	1 time only measurement when the trigger level is exceeded.				
External	Starts when a falling signal in the logic level of the external trigger terminal is detected.				
Time	Sets start time and trigger repeat interval.				
Delay time	After the start key is pressed, the time until the start of the measurement or trigger detection is set.				
Time setting	1 sec intervals within the range of 0 to 10 sec				
Back erase function	Measurement is temporarily suspended by pressing the pause key and the previous 5 seconds of data is eliminated from the calculation.				
Storage	The sound level or calculation results are recorded in the manual or auto-store mode. Data is recorded either in the internal memory or CF card. Internal memory has 1 block and it is possible to select either manual storage or auto-storage 1, 2.				

* Specifications subject to change without notice.

Distributed by:

Manual store	Manual recording of measurement results per address together with the measurement start time
Record data count	
Internal memory	Maximum 1 000 sets
CF card*	Maximum 1 000 sets per file name, maximum 100 files can be stored
Auto store	Continuous recording of measurement results at the set time interval (It is possible to append 4 types of marker data in order to be able to identify events that occur while recording) Pause does not function during auto-storage
Auto 1	
Measurement time	Maximum time: 1 000 hours (when using the CF card, refer to the following if using internal memory)
Sound level meter mode	Continuous recording in the CF card every 100 ms of L_p , L_{eq} , L_{max} and L_{min} as 1 set It is not possible to record sub-channel measurement results.
Sampling cycle	100 ms (L_p , L_{eq} , L_{max} , L_{min}) only
when using internal memory	Maximum time: 3 hours
Analyzer mode	Continuous recording in CF card instantaneous sound pressure level (L_p) in each band level and all-pass values
Main channel	All-pass values and band level values
Sub-channel	All-pass values only
Sampling cycle	1 ms to 1 sec, $L_{eq,1s}$
when using internal memory	Maximum 10 000 sets (1 sec or, for $L_{eq,1s}$, 2.7 hours)
Auto 2	
Sound level meter mode	Continuous recording in CF card of main channel and sub-channel all-pass values and measurement start time for each measurement time
Analyzer mode	Continuous recording in CF card of main channel band levels and all-pass values and sub-channel all-pass values and measurement start time for each measurement time
Record data count	Internal memory: Maximum 1 000 sets CF card: Maximum 300 000 sets
Data recall	Stored data access and time/level display (selected frequency band 1 only)
Memory store of settings	Maximum 5 sets of settings can be stored in internal memory and retrieved Start-up is possible under file setting conditions stored in the CF card in advance.
Printout	Measurement results can be printed using the special USB printer(Optional)
Screen print mode	1-page printing of the displayed screen
Memory print mode	Continuous printing of data in the specified address range in memory
Input/output	
AC output	Selection and output of all-pass signals of either the main channel or sub-channel
Output voltage	1 V (effective value) at range full scale
Output resistance	600 Ω
Load resistance	10 k Ω or more
DC output	Selection and output of all-pass signals of either the main channel or sub-channel
Output voltage	3.0 V, 25 mV/dB at range full scale
Output resistance	50 Ω
Load resistance	10 k Ω or more
Comparator output	Open collector output. Determination is also possible at the band level. The terminal is also used for the external trigger.
Maximum applied voltage	24 V
Maximum driving current	50 mA
External trigger input	Falling edge is detected at 0V to 5 V logic level. The terminal is also used for the comparator.
USB	Besides connection to a PC as a storage device, it is also possible to use communication device class and execute control by communication commands (however, settings relating to the transfer of stored data and storage action are not possible with communication commands).
Remote control reception	Control of NA-28 by infrared remote control (remote control NA-27RC1, optional)
Power supply	Four IEC R14P (size"C") batteries or external power supply
Operating time (23 °C, normal operating conditions)	When following not functioning ; sub-channel, backlight, AC output, DC output, USB function, remote-control, autostore
Manganese batteries	R14PU, 6 hours
Alkaline batteries	LR14, 16 hours (10 hours if backlight is continuously activated)
AC adapter	NC-94A
External power supply voltage	5 V to 6 V (rated voltage: 6 V)
Consumption current	230 mA (during normal operation at rated voltage)
Ambient conditions for operation	-10 °C to +50 °C, 10 %RH to 90 %RH
Dimensions, weight	331 (H) × 89 (W) × 51 (D) mm. approx. 730 g (including batteries)
Supplied accessories	Memory card (128 MB) MC-12CF1 × 1, Storage case × 1, Soft case × 1, AC adapter NC-94A × 1, Windscreen WS-10 × 1, BNC-RCA cable CG-24 × 1, Strap × 1, IEC R14P (size"C") batteries (alkaline) × 4
